Benefits

Enhance privacy

Reduce downtimes

Better control your devices

Optimize your cost

Complex deployments made easy

Famoco MDM is a turnkey solution that perfectly suits any size of organizations.

Famoco MDM provides the management of Famoco devices over-the-air, including a variety of connected devices such as handheld, biometric, ruggedized, attendance and access terminal, and Ticket Validator. Centrally & remotely manage your fleets of devices from one platform.

Enroll & deploy devices in a few seconds

No enrollment needed

Set up devices in the field instantly. When you receive your order, you only have to connect to a Wi-Fi or pre-connect a SIM card, then tap on sync to get your device ready. Your teams are ready to work quickly, and the deployment is simple and easy for any size of business.

Simple platform

The intuitive dashboard enables IT admins to manage, track, and secure a group of devices through one platform. Easy onboarding, create a profile with ease and deploy to your fleet of devices in few clicks.

Secure your data, secure your business

Kiosk Mode

Enable production mode to restrict access to the end-user to developer mode and the Android menu. Lock your devices to a single or multiple apps over-the-air.

Private App Library

Upload, delete and manage your applications in your private app library. It's the only way to deploy applications on your devices.

Look & Feel

Define one or various branding themes for your fleet, including your colors and your logo.

Customize each profiles with one of these themes to reflect your branding policy on your fleet.

Privacy protection

Famoco devices are based on Famoco OS. It's a business-oriented Android OS with enhanced privacy with no apps pre-installed. The device will be less likely to send your data to third-party servers.

User rights management

The IT admin can manage the level of rights on the MDM by setting different levels of permissions:

Admin, Observer, Fleet Manager, Device Manager.

Manage your apps and fleets effortlessly

Device profile management

Configure your devices' profiles over-the-air. Choose a panel of settings to achieve your objectives effortlessly: select the app(s), set the Wi-Fi, toggle the NFC, Bluetooth, Roaming, and APN. Customize your device to your brand by adding your branding to the boot animation. Every time your devices will load, your branding will appear.

Segment by fleets

Connect a device profile to multiple fleets to better manage your business for a geographical purpose, retail segmentation...

Monitoring dashboard

Real-time tracking of your devices synchronizations. Quickly identify devices that are not connected anymore. View the history of your device's activities to never lose track of your assets.

Mass export

Export any information from the MDM and create your dashboard. Export your data in.CSV or .JSON about your devices, fleets, profiles, applications, action tokens, API access, and members.

Bulk Management

Enable bulk management actions to run your business efficiently. Change any configurations in fleets of thousands of devices in a few clicks.

Multi-Organization and device transfer

Manage multiple accounts for fast and effective expansion.

Tokens

Update device profile in the field with an NFC tag. Give your teams the ability to perform fleet-related actions in the field.

Notification Center

Receive key information such as upgrade news or security warning directly in your portal via the Notification Center.

Interoperability

Integration via APIs

Connect the Famoco MDM with your backend system easily. Read and write every data of the Famoco MDM from your own system.
